Product Experience

Algorithm: Smart Sleep Sound Therapy Device

Product Lead

- Owned end-to-end product lifecycle by translating user sleep pain points into a prioritized roadmap of hardware and software requirements; directed a cross-functional team across 12+ sprints to deliver a final release aligned to validated usability criteria and performance targets.
- Planned and executed a 1-month, 150-night user validation study, achieving 90% sleep-efficiency and reducing sleep latency by 66%; translated study findings into a feature decision matrix that determined final release scope and cut non-impactful requirements by 30%.
- Built the companion mobile app in Flutter to operationalize closed-loop sleep tracking, enabling measurement, visualization, and iterative feedback; supported 2 major data pipelines between device and app to reduce time-to-insight by 40% for end-user sleep metrics.

GasGuard: Smart Gas Leak Detection System

Product Lead

- Spearheaded end-to-end discovery and product scoping for a ground-up IoT safety platform, balancing reliability, false-alarm rate, user trust, and cost drivers to define product trade-offs and success criteria, including targeting <2% false alarms, <1 s alert latency, and 99.9% sensor-to-alert reliability.
- Shipped a real-time operational dashboard using Vue.js/JavaScript, transforming raw sensor telemetry into actionable views for non-technical operators and reducing time-to-decision from triage to action by 40% across 20+ monitored device signals, with updates at 250ms intervals and >95% UI uptime.
- Executed rigorous QA cycles for sensor calibration and Firebase-driven alerting, verifying closed-loop performance under real-world noise and edge cases to ensure reliable triggering, improving alert detection consistency by 30%, achieving 99.5%+ calibration pass rates, and maintaining <0.1% missed-alert incidents during regression testing.

Work Experience

SM Megamall Concentrix

Mandaluyong City

IT Support Intern

Jul 2025 – Sept 2025

- Triaged and resolved 50–60 support tickets weekly under time pressure, prioritizing by business impact to minimize downtime for live call center operations.
- Led the infrastructure modernization of a full production room (hardware upgrades + software deployment) with zero downtime during active shifts, requiring careful sequencing and cross-team coordination.

SDR Computer Trading

Quezon City

Computer Technician Intern

Jul 2025 – Sept 2025

- Managed the end-to-end assembly and deployment of 25 complete desktop workstations for an educational client, meticulously ensuring hardware compatibility and quality standards.
- Troubleshooted and resolved technical malfunctions for 5-10 customers weekly, successfully translating complex technical issues into clear, understandable solutions for non-technical end-users.

Skills

Product: Requirements Gathering & Definition, User Research, Prioritization, Agile/Scrum, QA & Test Planning, Cross-Functional Collaboration, and Data-Informed Decision Making

Technical: Nuxt, Vue, JavaScript, HTML, C++, Firebase, MySQL, SQLite, Flutter

Business Tools: Figma, MS Excel, MS PowerPoint, Canva, Notion

Hardware/IoT: ESP32, Arduino, Embedded Systems, IoT Protocols, PC Assembly & Diagnostics

Education

Bachelor of Science in Computer Engineering

Polytechnic University of the Philippines | Sta. Mesa Manila, Philippines
